

# Crowd Speak

a W3C idea

Team:

Katelyn, Rita & JC- Presentation Deck

Mike - UI Design

Dan & James - Development

Kevin & Chris - QA

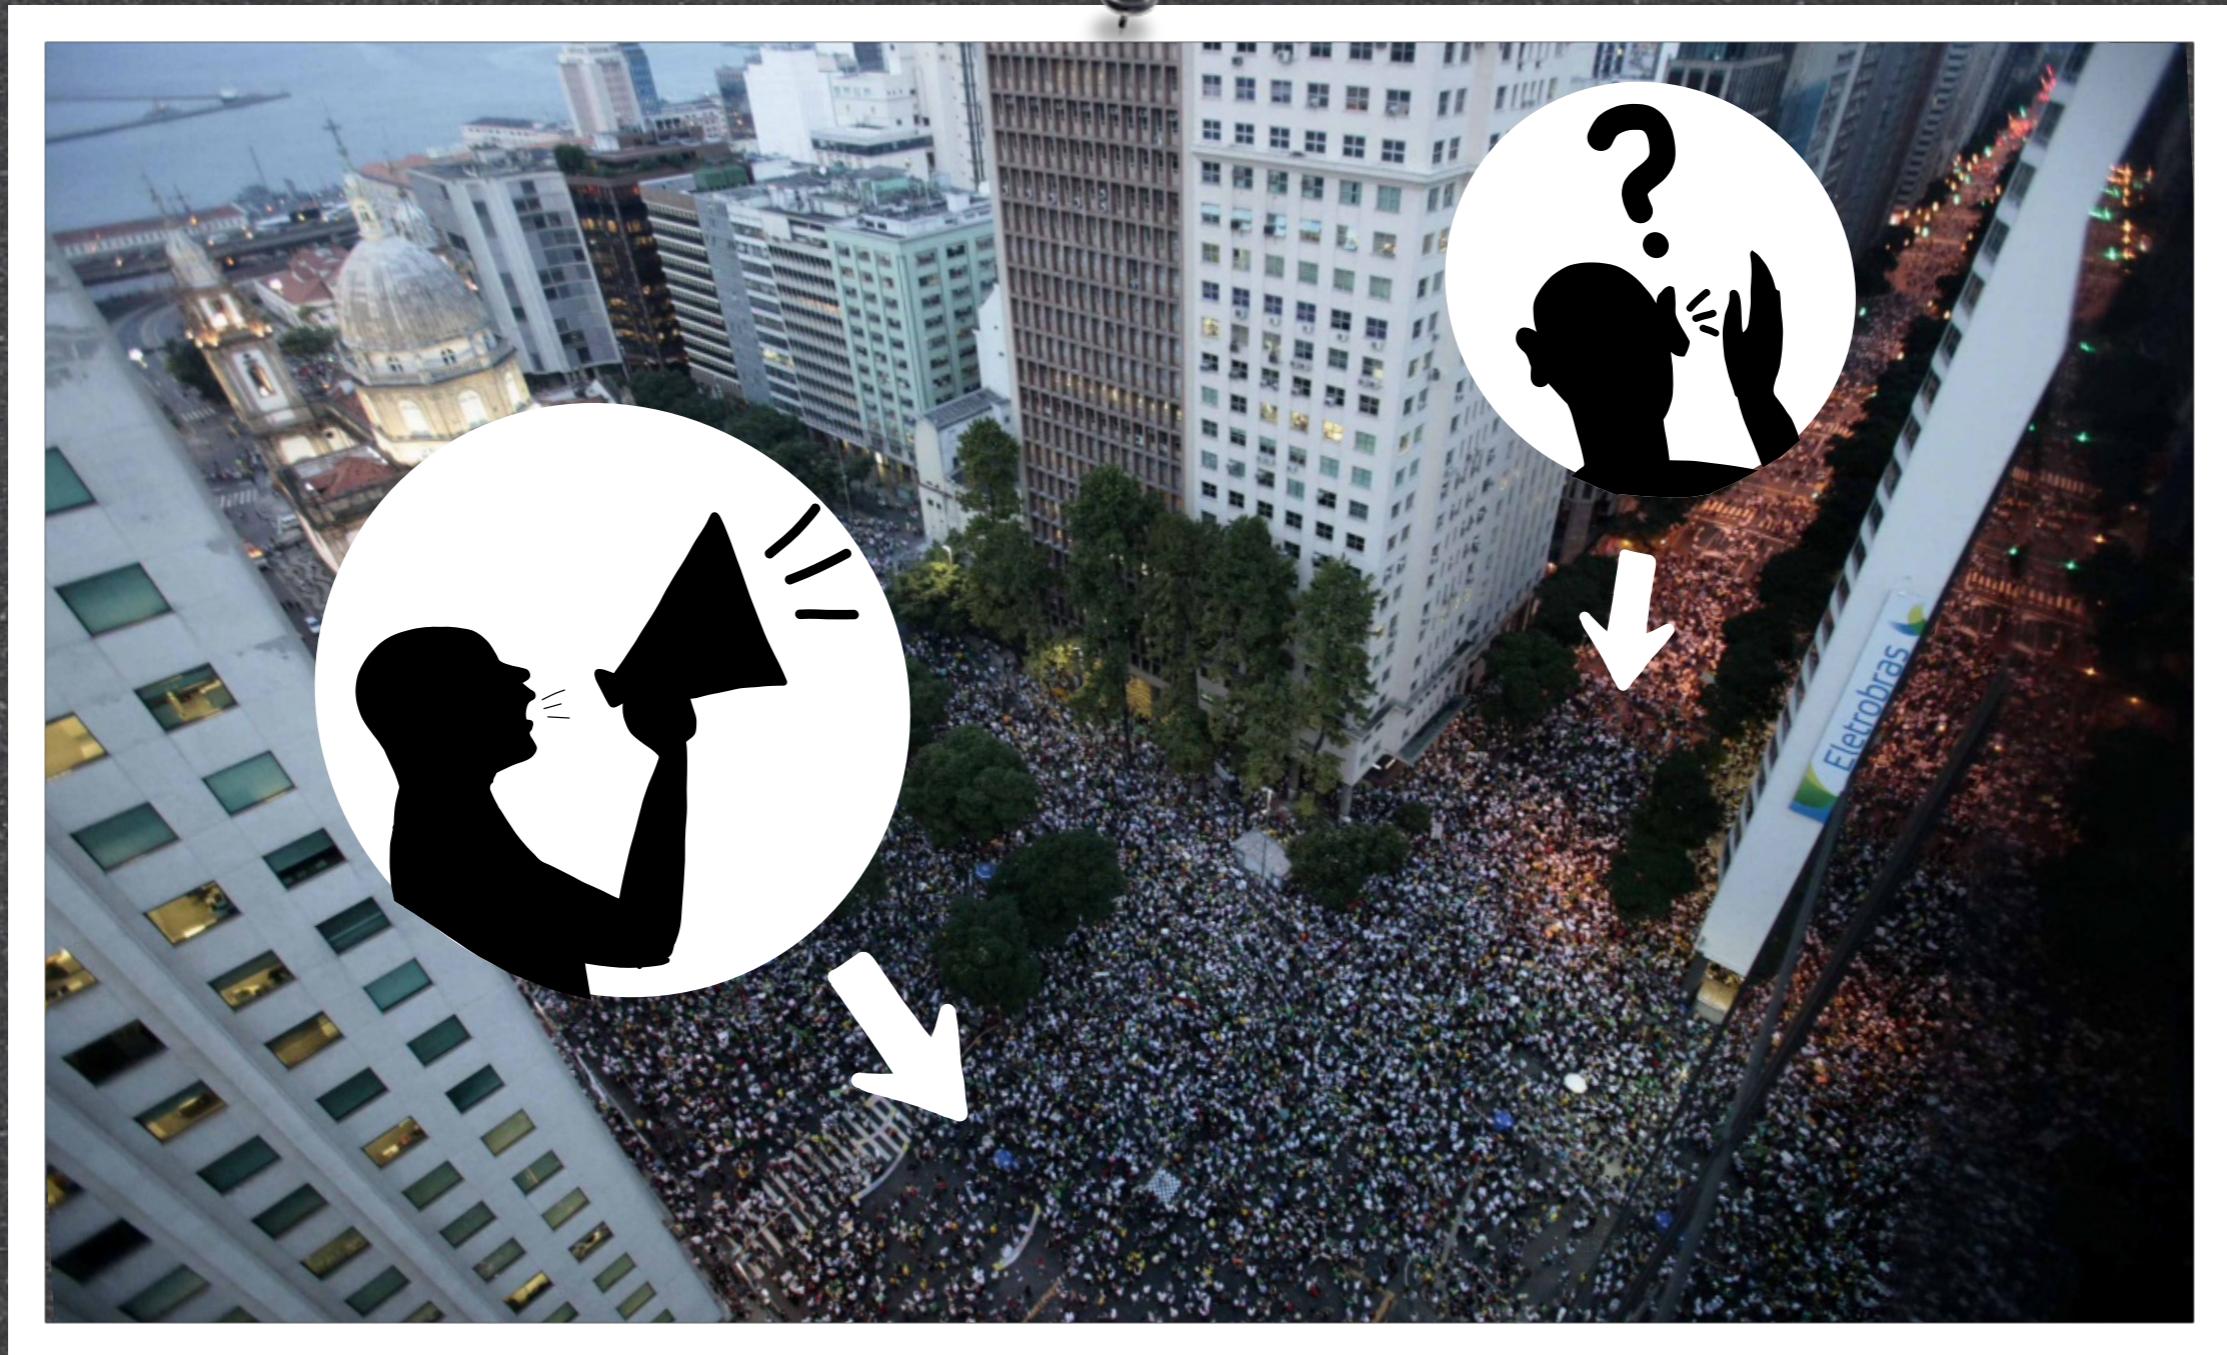

JC - Project Manager

#hacksocialgood

Hackathon for Social Good

Adaptive Path, Austin TX

# Why Crowd Speak?

- Audience has trouble hearing the speaker

# What is Crowd Speak?

- A service to amplify a message across a large group using decentralized nodal communication.

# What is Crowd Speak?

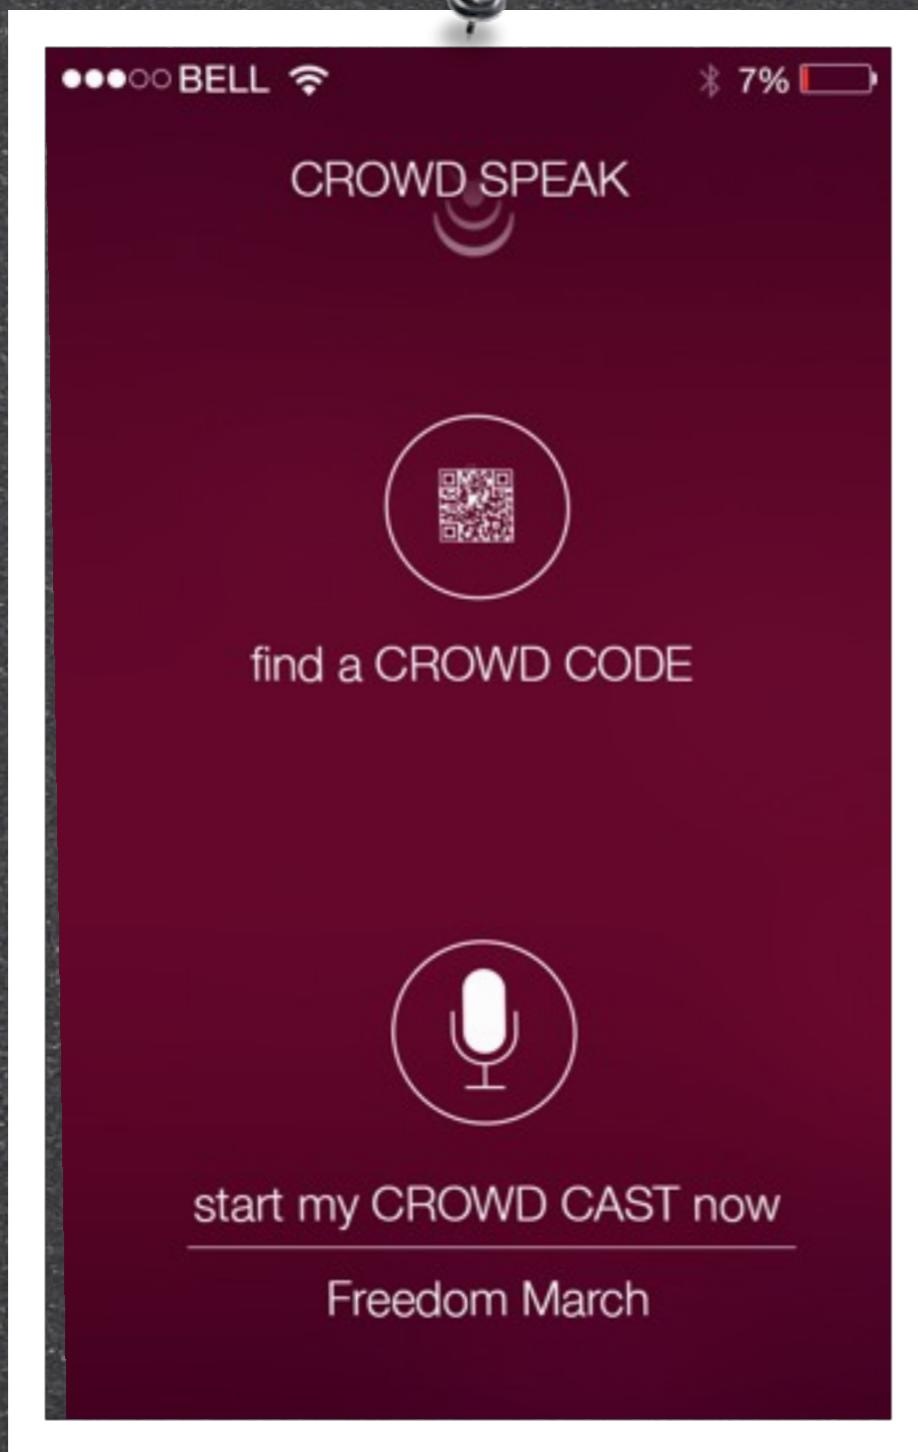

- Unique QR codes are generated for the speaker and each of the replicators, enabling peer-to-peer sharing.

# What is Crowd Speak?

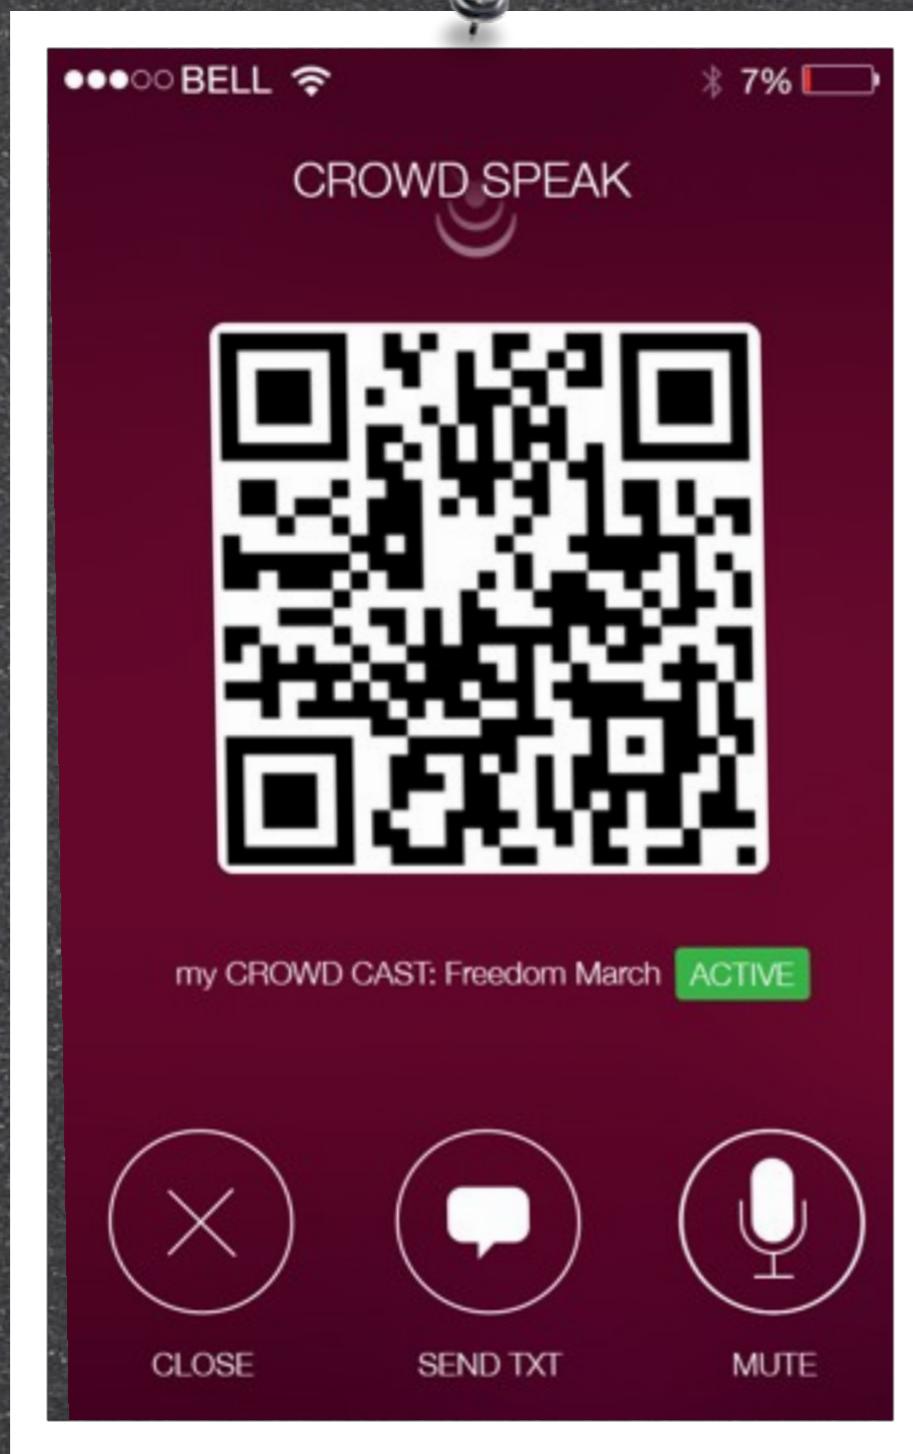

- Through these unique QR codes, crowd speak can be heard by everyone with a smartphone.

# Crowd Speak

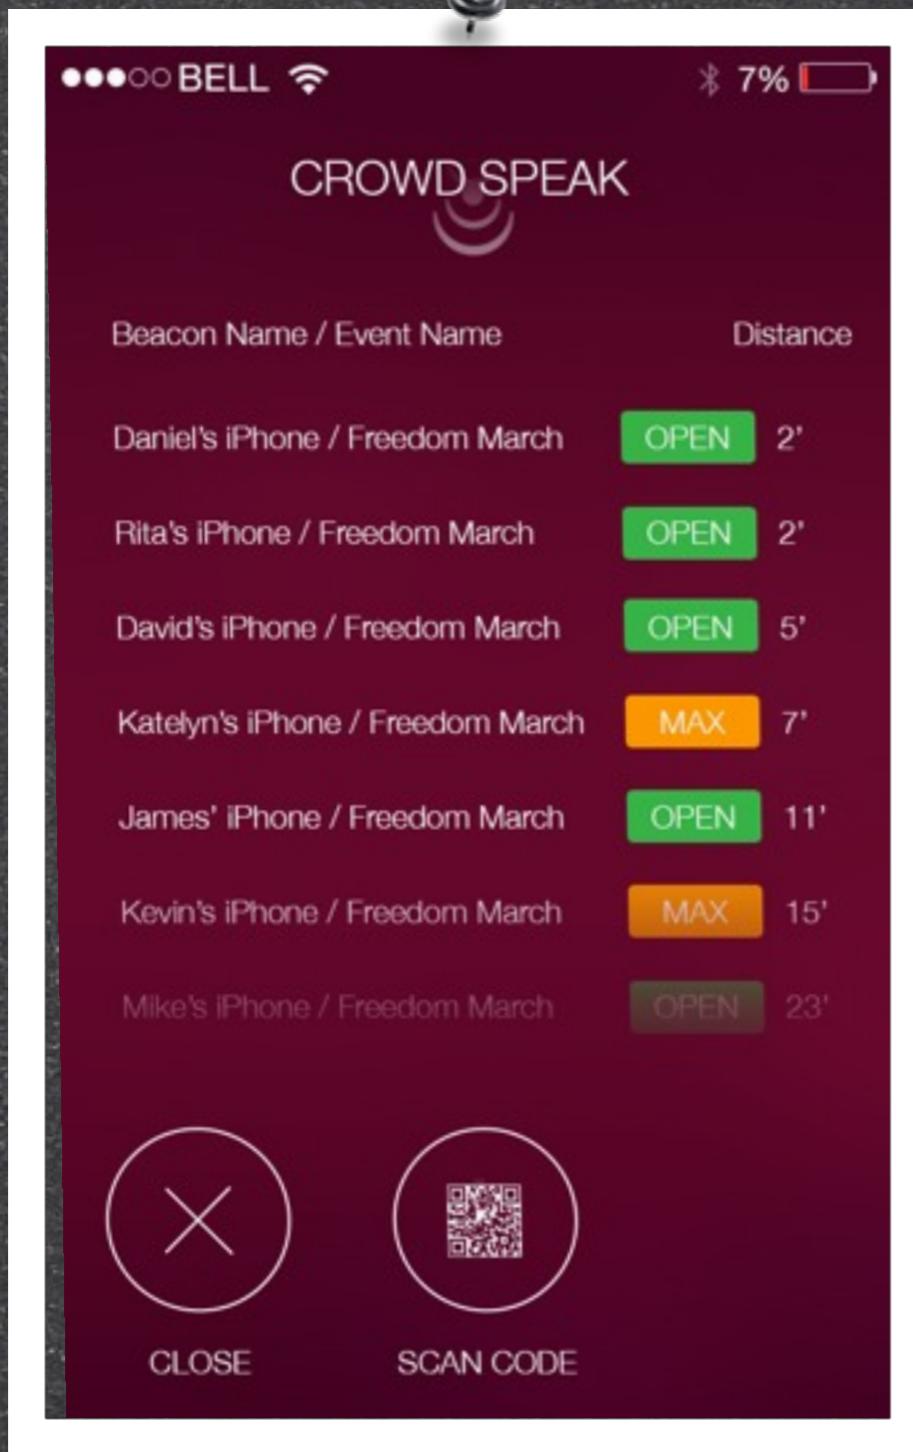

• Crowd Speak is launched as a way for a speaker to convey a message across a large crowd, using P2P QR code generation.

# Crowd Speak

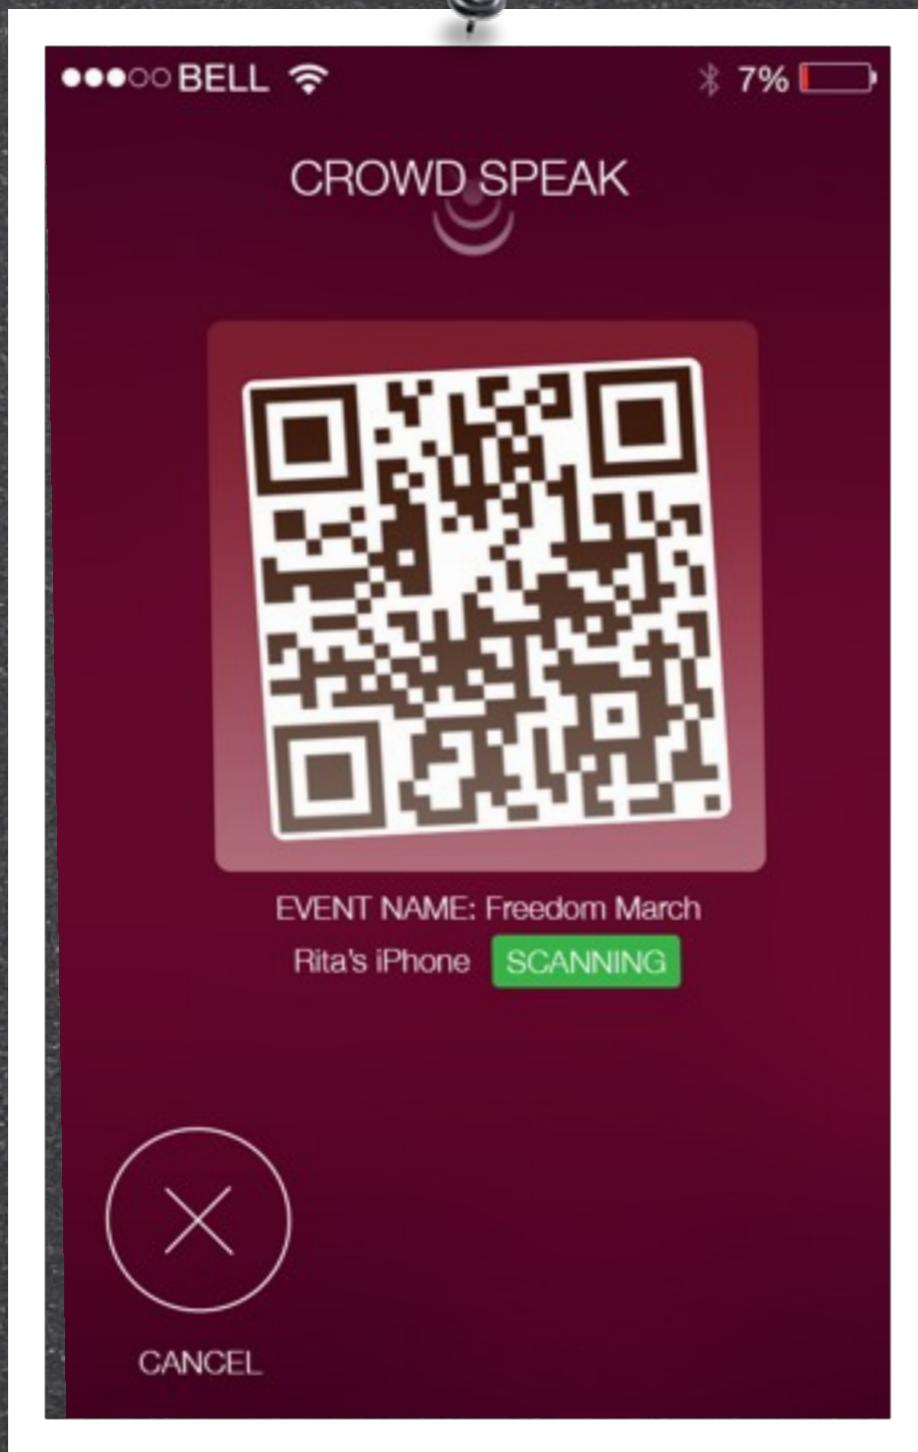

- A QR is generated for the Crowd Speaker to bridge across listeners.

# Crowd Speak

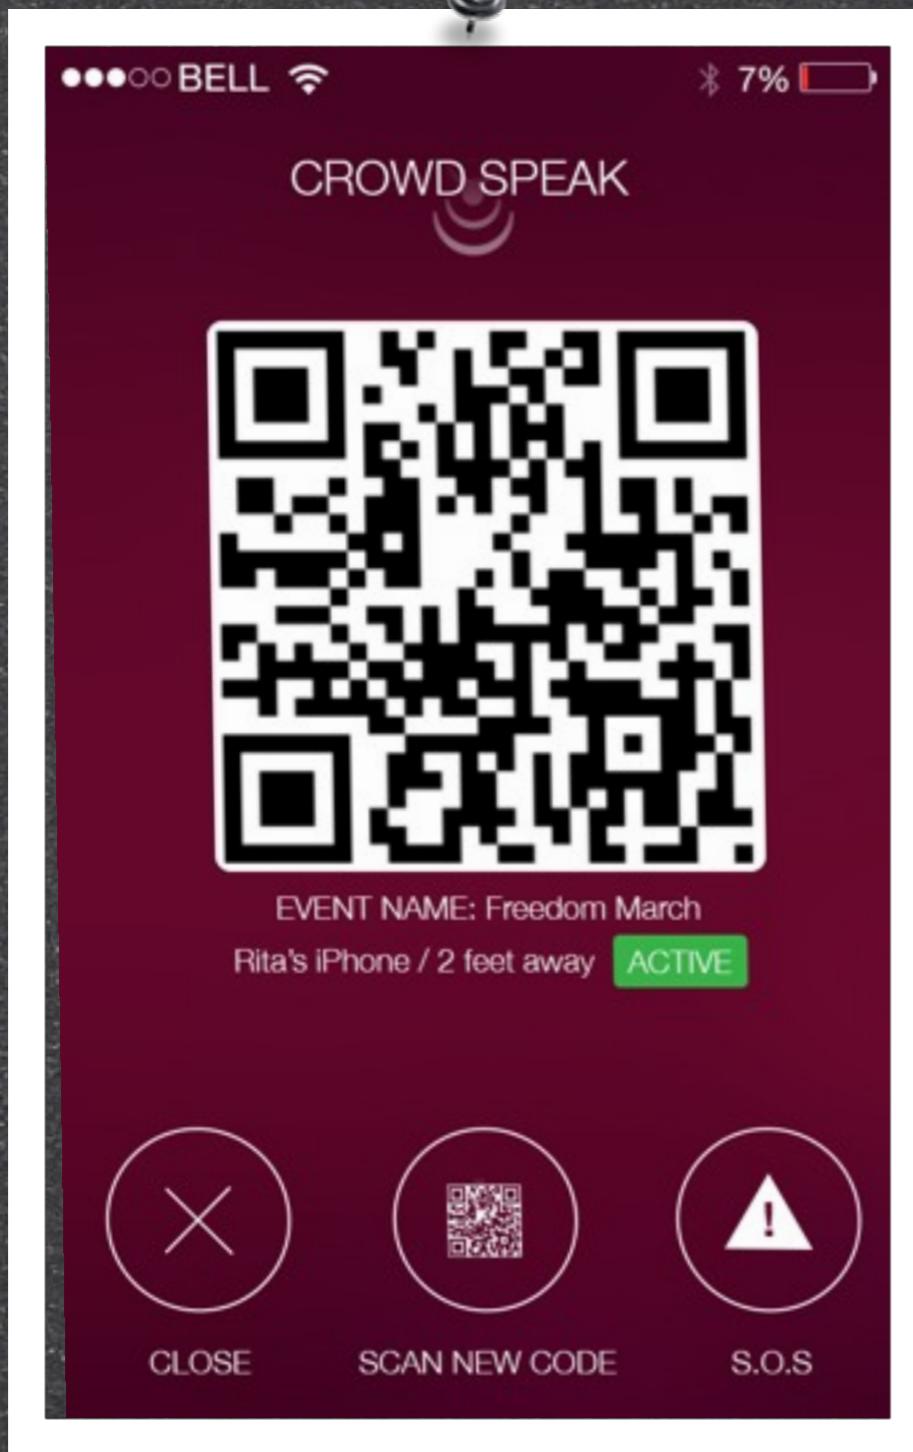

- 那人 Those wanting to listen in can browse available nearby connections.

# Crowd Speak

- Listeners easily create a connection to spread the message to peers with a unique QR code to balance the load.

# Crowd Speak

- Audience listening generates their own unique code to relay in small groups around them - creating nodes of communication

# Crowd Speak
